

# Bespoke Corrugated & Timber Kitting

Product Profile  
by Maxpack

Single Source the Full Kit

Pre-Kitted for Fast Packing

Delivered Line Side

Increase Protection, Reduce Damage

Reduce High Stock Volume

Experienced CAD Designers

Having the packaging ready to pack parts straight into without having to do any onsite pre-assembly or kitting saves valuable time and space.

## Design

We have qualified designers who have experience with CAD Software, design programs and CAD production tables for developing solutions in corrugated and other materials for testing, trialling and prototyping.

## Manufacturing

An understanding of the different capabilities of the UK corrugated production plants and timber pallet & case producers is important to bring a seamless product solution to the customer kitted and ready for use.

## Supply Chain

Systems to ensure constant JIT supply are critical to ensure that your production is matched with the supply of correct packaging. Out of stock panics or overstocking can be managed out with tried and tested stock control and supply chain arrangements that are set up to be system driven rather than operator driven.

## Benefits:

Full set of packaging pre-kitted for fast packing of a single part or a quantity of parts / Just enough packaging can be delivered line side daily or to any agreed schedule / Single source the timber, corrugated outers, inner fitments along with polythene bags, VCI, interleaving straps, foam etc from one reliable source / Bespoke kits produced specially for your product to increase protection, reduce damages and reduce the need to stock high volume of separate parts of the packaging kit / Experienced CAD designers to provide bespoke packaging development / CAD cutting table to produce samples for prototyping, testing and solution developing.
