Our Story

In 1976, our founder set up his family firm providing bespoke framing services to retailers, photographers, interior designers and fine art publishers. In 1996, Maxpack, with the vision of providing service and reliability of supply, was born out of that original family business. Today we continue to evolve our services and drive innovation that supports our mission.

With over 25 years of experience and gaining feedback from many customers we have been able to align ourselves with the needs of manufacturing and distribution to drive cost savings, increase packer productivity, reduce need for storage space, achieve ambitious sustainability and carbon reduction targets, minimise wastage, eliminate stock outs and systemise packing processes.

Our Mission

Providing solutions that protect your products in the most sustainable way.

Protecting your Production.

Our Vision

The trusted packaging partner for growing and thriving UK Manufacturing and Distribution companies who demand sustainability, peace of mind, fast response, fast delivery, and onsite support.

Sustainability

Elevate sustainability with our comprehensive solutions.

Innovation Centre

Visit our innovations centre in Shrewsbury where we can take your products and develop new more sustainable packaging solutions. We also have available for you to test, all our new containment products including, PC Nets, Pallet Lids and PaperStrap.

Carbon Footprint Friendly Range

We have developed and continue to develop products that set new standards for sustainability.

For example; hand applied carton sealing tape EcoTEK has a small 25mm core enabling over 2.27x more tape in a carton and 56% less cardboard waste. Hand applied stretch wrap WrapAir, uses high performance film grades allowing 89% more film in a carton and 45% less plastic to wrap a pallet.

Machine applied pallet stretch wrapping film Nano Stretch, used in the right pallet wrapping machine will enable 47% plastic reduction with more than double the quantity of pallets wrapped using 1 pallet of Nano Stretch over conventional films.

Ocean Range

We provide a full range of products produced using a minimum of 30% recycled content. The range includes polythene bags, polythene covers, packaging tapes, stretch wrap, polypropylene and polyester strapping, protective films, void fill films, foams, edge protectors, bubble wrap.

Reusable Range

We have worked with leading brands to develop ways to move products safely between factories or within factories eliminating the need for single use plastics. These innovations centre around pallet containment. Our solutions will secure your pallets during transit efficiently and effectively whilst also reducing the reliance on single use plastic packaging. We provide a consultation service for clients looking to make process changes that embrace new ways of working.

Packaging Sustainability Audit & Progress Reporting

Our experienced Key Account Managers can provide you with a Sustainable Packaging Audit. This will give you a packaging sustainability score that enables you to track your progress towards a more sustainable future.

Weight Analysis Reporting

We have built a database that enables us to provide comprehensive packaging weight reports. With the growing need of data for EPR (Extended Producer Responsibility) and other compliance schemes we will do all we can to provide you with the data you need.

Proudly providing sustainable packaging solutions for...

Paper Solutions

We are leading the way in providing paper based bundling and strapping solutions. Modifying existing automatic and semi-automatic machinery to run paper strapping material that provides the fast and efficient strapping solution we expect from traditional plastic options.

Customisation

Unlock tailored packaging solutions for optimum performance.

Bespoke Design

We work with you and your teams to understand your product and how it travels. With this detailed scope we are then able to design packaging that works all the way down the supply chain.

Prototyping & Sampling

We have full prototyping and sampling capabilities within our facility in Shrewsbury. This ensures projects are moved along quickly.

Drop Testing

Working with customers Drop Test requirements and ensuring packaging is not over or under engineered. We are working to ensure that you are provided with cost effective solutions that deliver the results at the best possible price. We work with partners who have ability to simulate product journey. Taking your product and working with packaging in simulated journeys can give us great insights into the performance of packaging. This can be important for products that need to be temperature controlled.

Corrugated, Paper & Timber Packaging

Corrugated packaging designed for your product and supply chain situation. We work extensively with corrugated packaging to replace less sustainable materials including foam in place, foam, polystyrene, plastic retention and plastic based cushioning and void fill.

Printed Packaging

Supporting you with design and print on all packaging including films, bags, self-adhesive tapes, strapping, labels, mailers, tubes, wallets, paper cushioning for example.

Visual Product Packaging

Visual packaging that protects and promotes your product. Stand out customised visual product packaging. We provide support with concept design and prototyping of solid board and micro fluted packaging. We work with water based environmentally friendly inks and FSC certified materials.

Polythene & Foam Packaging

Plastic packaging allows us to protect, preserve, store and transport products in a variety of ways. Without plastic packaging, a great deal of products that consumers purchase would not make the journey to the home or store or survive in good condition long enough to be consumed or used. Therefore, there is often still a convincing case to use plastic. Plastic is easy to customise ensuring minimal waste and optimum performance. We will help you to make the right choice.

Systems

Optimise operations with our integrated systems and support.

Process Engineering

Our experienced technical team will collaborate with your people to understand your existing processes and potential improvements that could be made to either reduce head count or to speed up outputs. Detailed flow diagrams can be provided that will help you to optimise your packing process.

Rental

We have a growing pool of rental equipment to support our customers fluctuating demand. Equipment includes friction weld handheld strapping tools, strapping machines, pallet wrapping machines, paper void fill machines and polythene void fill machines.

Repairs & Maintenance

Underpinning our rental pool and machinery sales is a trained team of technicians who provide on-site or back to base support with repairs and maintenance.

Pallet Wrapping

To ensure maximum gains are achieved using Nano Stretch and FastWrap products we partner with Aetna and Lantech who provide the absolute best stretch wrapping equipment available on the market. We can support with single stand-alone units through to inline automatic installations that will deliver consistent film savings through the power pre stretch units.

Void Fill & Cushioning

Paper and polythene void fill systems still play a vital role in protecting goods during transit. They both provide a flexible solution enabling multiple products to be packed together in a carton for despatch. We provide the market leading systems including Ranpak for paper-based solutions and Airworks for polythene void fill, for reliability and efficiency.

Strapping

Manual, semi-automatic and automatic systems for the application of polypropylene, polyester, and paper strapping. We supply a complete range of equipment to suit all applications including inline machines, standalone semi-auto and automatic machines, battery powered and manual handheld tools. All equipment can be provided with maintenance packages to ensure ongoing reliability.

Carton Erection & Sealing

Semi-automatic and automatic case erectors and sealing machines from market leading manufacturers Lantech and Siat. We have equipment in our innovations centre for demonstration purposes and to help you understand how automation might help you in your packing process.

Stock & Supply Chain Management

Streamline stock management with our customised services.

On-Site Checking & Replenishment

Our trained sales support team can visit your facility to count packaging consumable stocks and provide replenishment orders for approval. This service can also ensure we keep up to date with your production schedules, giving us upfront warning of fluctuations in requirements enabling us to manage production of customised products accordingly.

Call-Off

Call-off orders allow you to take advantage of the cost saving associated with larger production runs and then calling off stock over a 2–3-month period.

Stockholding

Stockholding arrangements provide you with the peace of mind that all your regular packaging items will be held in stock for you, ready for immediate delivery. Stock levels are shared weekly, and adjustments made as required during the auto renewing 12-month agreement.

Free Stock (Consignment Stock)

The benefits of Free Stock are that you only pay for the goods you use, and you have stock levels managed for you, eliminating out of stock panics, and ordering administration costs. Each month an invoice is raised for the goods used also helping reduce administrative burden on your finance team.

Scheduled

Helping you reduce the amount of stock you hold at your site by providing you with regular scheduled deliveries. These orders can be adjusted but for situations where you have regular usage this service can dramatically reduce administration for you and your teams.

Consolidation

We help analyse products that you use across multiple sites looking for consolidation opportunities to gain quantity discounts, reduce supplier count and simplify ordering. Consolidation exercises can bring significant cost benefits through reduced administration, better buying prices and simplified processes.

Product Range

Our product book contains a wealth of information to support you and your teams with your search for packaging products. Detailed product information helps make product selection and ordering easy.

Product Sourcing

We have an experienced team set up to source new products. Your sales contact will take details of your requirement and process a special quotation request. If we can source the product for you, we may add it to your stockholding agreement.

Our Values

- Serving.** Be available and open to the opportunity to serve.
- Understanding.** Listen with the intent to understand.
- Collaborative.** Clarify desired outcomes and envision success.
- Helpful.** Be resourceful and solve problems.
- Accountable.** Follow up and follow through rather than assume.

Carbon Reduction Plan

Our commitment to achieving net zero by 2040.

Strong commitment has been demonstrated towards achieving Net Zero emissions by 2040, adhering to principles of environmental responsibility and sustainable business conduct. A well-articulated Carbon Reduction Plan serves as the guiding document, specifying key initiatives, goals, and the progress made so far. Baseline emissions for the year 2021 are pivotal as they provide the foundational reference for tracking and evaluating the environmental impact going forward. **Over the course of 2022, a series of changes were implemented, such as the transition to LED lighting and the adoption of virtual meeting technology, which collectively resulted in a total emissions reduction from 224.6 tCO₂e in 2021 to 212.1 tCO₂e in 2022—a 5% decline compared to the 2021 emissions intensity baseline.**

Looking ahead, a comprehensive roadmap is in place to facilitate the journey to Net Zero. This roadmap includes the development of Scope 3 emission reporting capabilities, the formalisation of carbon budgets, transitioning to a zero-emission car fleet, and endorsing sustainable travel initiatives, among other strategies. The Carbon Reduction Plan has been meticulously reviewed and approved by the board of directors, complying with all pertinent statutory guidelines and conversion factors. It also aligns with SECR requirements and the GHG Reporting Protocol. This approach underscores the high level of importance assigned to environmental responsibilities and sets a benchmark for responsible corporate behaviour in mitigating climate change.
